

Select Series Replacement Parts

The Select Series™ product line includes the Nordson Advanced Technology RTD Hot Melt Hoses, the superior Series H-400/H-440 Hot Melt Dispensing Guns and the ergonomically designed AD-41 Handguns and Hoses.

The product offerings include:

- Replacement for ITW Dynatec® guns and hoses for the Dynamini™, Dynamelt®, Dynapro®, and Dynaplus™ — 8 hoses and 20 guns.
- Replacement for HMT® handguns and hoses for the ProFlex® units — 3 hoses and 2 handguns.
- Replacement for Robatech guns and hoses for the Concept 4 unit — 4 hoses and 10 guns.
- Special orders for other products not listed above are accepted. These products are built to order and special pricing applies.
- The Select Series guns and hoses may be sold individually or sold together.

Select Series Dispensing Guns and Hoses

- Select Series guns and hoses are available for automated or manual systems.
- Advanced-technology hoses provide safe operation, thermal accuracy, and reliable temperature control for consistent flow rates and uniform patterns.
- Rugged, quick-disconnect electrical plugs on guns and hoses speed installation and servicing.
- Aramid insulation on hoses improves chemical and moisture resistance, eliminating hardware corrosion caused by emissions at elevated temperatures.
- Hoses contain two separate ground paths protecting personnel from injury and equipment from damage.
- Area-sensing resistance temperature detectors are more than 99% ennealed platinum sensors to provide repeatable and reliable temperature sensing (ITW Dynatec).
- Unique thermister manufacturing process provides accurate repeatable temperature sensing (Robatech).
- Point-sensing temperature devices on manual hoses accommodate continuous movement applications (Hot Melt Technologies).

Select Series Dispensing Guns

- Series H-400 or H-440 automatic guns provide superior service life, excellent hot melt cut-off, and accurate thermal sensing for consistent flow rates, fewer replacements, downtime, and maintenance.
- AD-31 handguns are ideal for polyamide applications or for any chemically aggressive and/or high temperature adhesive.
- AD-41-H manual handguns are ergonomic and reduce operator fatigue. A variety of configurations allow specific dispensing positions for pinpoint placement. Guns easily convert online from standard extrusion nozzles to spray, swirl, or down-apply extrusion.
